ProfiHunt 2025

LIVING LIFE AT THE TOP

Vladimir Melnikov CEO of ProfiHunt

Dear Hunting Enthusiasts,

Welcome to 2025, a year that marks a new era of adventure and achievement in the world of hunting. As we journey through this year, ProfiHunt celebrates the relentless spirit and passion that define our community. This year, we've witnessed extraordinary accomplishments from our valued clients. A special recognition goes to Renee Snider and Lee Friend from the US.

Their remarkable expeditions in August led them to the remote wilderness, where they successfully hunted the new recognized specie Kharaulakh Snow Sheep.

These triumphs not only added rare trophies to their collections but also set new benchmarks in the hunting community. Furthermore, Lee has returned to Russia in November for the combo of Lynx & Musk Deer nearby Baikal Lake and Chukotka Moose in Kamchatka.

Our team, ever diligent and knowledgeable, stands ready to assist you in planning your next great hunt. Whether you're a seasoned hunter or new to the sport, we're here to ensure your experience is nothing short of extraordinary.

As we look ahead, let's embrace the opportunities that 2025 brings. Let's set our sights high, challenge our limits, and create memories that will last a lifetime.

Join us in celebrating the spirit of hunting and the great outdoors.

Best wishes for a successful and adventurous year!

Warmly,

The ProfiHunt Team

Vladimir Melnikov

ProfiHunt

Hunting in Russia, Asia and Europe

PROFIHUNT TEAM

VLADIMIR MELNIKOV
Founder & President

Vladimir was born in 1965 in Siberia where he graduated from the Game Management Faculty. His father was a big hunter, wildlife biologist, professor and has over 150 research articles, books about wild game and hunting. Vladimir was taken hunting when he was a child and, of course, he was one of the first Russians who went hunting in Africa and other continents.

Vladimir was a director of the Hunting Department of the Russian Federation (RF) from 2006 to 2010, then Deputy Minister of National Resources and was responsible for hunting, Flora and Fauna of RF.

ARTEM VESELOV
General director

Artem is General Director of ProfiHunt. He has been working for ProfiHunt since 2004. He deals with agencies and clients from all over the world. Artem speaks English, French and German. He was born on 2 December 1978 in Tolyatti, Russia. In 2001 he graduated from the Department of the Foreign Languages of the Vladimir State University. In 2010 he finished his education at the Moscow Financial Academy, Department of Finances and Credit.

E-mail: Jagd@profihunt.com
Skype: Profihunt-Jagd

ALEXANDER PETRUSHENKO
Professional Hunter

Alexander is our experienced English-speaking Professional Hunter (PH). Alexander began hunting when he was 12 years old and made hunting his main occupation. He has graduated Vyatka State Agricultural Academy as a biologist-outdoorsman and started working in ProfiHunt as a PH in April 2012. Right from the beginning he proved himself as a hardworking cheerful hunter ready to help in every situation with any matter.

DENNIS SHADOW
Hunting department specialist

Works mainly with Foreign and Russian clients for Russian and Asian hunts, but is knowledgeable a lot about African and European destinations.

Denis joined ProfiHunt in June 2008 and have already proved to be responsible and eager to work out every single detail of each journey he arranges. His clients are sure to occur in good and friendly hands!

E-mail: Hunt@profihunt.com
Skype: Profihunt-Asia

ALEXEY PAVLOV
Hunting department specialist

A member of Hunting Department staff, deals with Russian and English speaking hunters. In the year of 1995 Alexey completed his studies at Moscow Teachers Training University in the field of Geography and the English Language. Since 1993 Alexey is a member of Russian Geographic Society. He is friendly and outgoing person, deserved brilliant reputation in hunting society. Joined ProfiHunt in 2011.

E-mail: Africa@profihunt.com
Skype: Profihunt-Africa

RIFAT DIANOV
Meet & greet manager

Rifat is 31 years with ProfiHunt. He is responsible for meet and greet with our guests at the airport of Moscow.

He takes care of all transfers, customs formalities and connected flights to the final destinations.

Kuban Tur is a highly desirable trophy. Only comparatively small part of Caucasus Mountains holds population of Kuban Tur. Hunting is a great challenging experience. Many hunters in the past got back home without seeing a single ram. We changed the situation completely. Since 2005 our clients had 100% shooting opportunity with 100% success.

Kuban Tur counts both towards the Ovis and Capra World Slams.

See our clients in SCI Record Book: Butch Kufalak, David F. Myrup, Dennis Campbell, Eduardo J.M. Gerlero, Gary D. Parker, George Harms, Jeffery L. Meyerl, Lee Friend, Mike J. Borel, Richard Sand, Jim Shockey, Bryan Harlan.

This ever popular hunt has been attended by some of the biggest names in hunting and ProfiHunt is proud to have assisted all our clients to achieve some of the largest trophies in this region.

Some Turs live on the eastern side of the Caucasus Mountains and are called Dagestan or Eastern Tur, the other live on the western side of the Caucasus Mountains of Russia and are known as Kuban (Western) Tur.

Mid-Caucasian Tur inhabits those areas where these two species are mixed - Nalchik area. The three different Turs count towards both the Ovis and Capra World Slams. With no doubts Tur hunts are the very demanding, you should be completely ready for this challenging adventure, but the reward worths it.

See our clients in SCI Record Book: Arthur R. Dubs, Gary D. Parker, Gary Rigotti, George Harms, Kenneth L. Barr, Larry Higgins, Richard Sand, Jim Shockey, Bryan Harlan, Eduardo Negrete, Lee Friend.

Dagestan Tur hunts in Russia are becoming more popular specially among hunters who are interested in combo hunts for 2 or 3 different species of Tur with less travel, expenses and time wasting.

We organize the hunt in the Dagestan republic which is bordering with Azerbaijan.

Every year trophies in range of 37-39 inches are taken with average of 33 inches.

In 2024 our Mexican hunter took a monster Tur of 41 inches!

We deliver what we promise, and only promise what we can deliver.

Caucasian Chamois in Russia

Robert Mays

C hamois are graceful, nimble and surefooted animals that inhabit high alpine slopes. When alarmed, chamois hide in inaccessible places. Chamois look like a crossbreed of a mountain goat and an antelope and originate from the mountains of Asia and Europe. They are seldom found below 5.500 feet, and often live as high as 13.000 feet.

The Chamois counts toward the Capra World Slam.

This combination is our strong point, we do these hunts for more than 20 years already, we know how to make every detail perfect to provide you with memorable experience.

North Ossetia republic nowadays is the only place where you can harvest Caucasian Chamois. Number of licenses is limited, book your hunt NOW!

Kharaulakh Snow Sheep

Dmitry Makarov

A new subspecies of snow sheep in Russia, Kharaulakh Snow Sheep, is officially acknowledged by GSCO and SCI. After years of scientific researches and several highly successful trial hunts, we are happy to announce the first successful hunts organized for our USA customers Renee Snider and Lee Friend.

The hunting ground located in Bulunsky district, Republic of Yakutia, Russia. Kharaulakhsky mountain range hunting area of 997.76 thousand hectares locates in the northern part of Yakutia.

Elevation varies within 2000 – 5000 ft.

Hunting is done on foot. Spike camps are used if rams are found far from the base camp.

The terrain is not very complicated, but it challenges a hunter nevertheless.

Kamchatka Snow Sheep inhabit the central part of the Kamchatka Peninsula. The average trophy size is 30-35 inches with occasional 40-inch ram taken.

These Sheep have the heaviest bases of all Snow Sheep of Asia. We do not promise you to see a lot of rams but strive to make your hunt successful.

Kamchatka Snow Sheep is a 100% chance hunt. You should expect to walk and climb a lot, live in a spike tent camps. The mountains are not as tough as in Caucasus, but still the hunter should take them seriously.

Now days to get to the Kamchatka peninsula, you need to fly with Turkish airlines to Moscow and then with Aeroflot to Petropavlovsk - Kamchatsky - the flights are every day. A Kamchatka Brown Bear can be hunted on trophy basis as additional trophy.

ProfiHunt holds the World Record ram with fantastic SCI 179 3/8 scores taken in 2014.

Yakutia Snow Sheep in Russia

Renee Snider

M.G.

Russia has a vast opportunity for hunting different species of Snow Sheep. Snow sheep population in Russia is estimated to be around 57.700 heads.

A large portion of Sheep population is located in Yakutia. Success rate is nearly 100%.

You fly to Moscow where you are met by our crew, and then you will fly to Yakutsk. We will do everything possible to expedite the customs procedure. From Yakutsk you will be transferred to the camp by helicopter MI-8 or by ground transportation depending on the specific area of your hunt and the number of hunters in the group.

Try us out and you will see that you save time and money by counting your relationship with ProfiHunt!

Kolyma Snow Sheep in Russia

Pierre Mirabaud

Dmitry Kotenkov

This Sheep is found only in the Magadan Region, and predominantly in the Kolyma Mountain range. The eastern boundary is considered to be the large river valley west of the Koryak Mountains of the Koryak Autonomous Region.

The northern boundary is considered to be the Chukotka Autonomous Region border.

The western boundary is considered to be the border of Yakutia, from the Omolon River to the Kolyma River. The western boundary then follows the Kolyma River to the Trans-Siberian Highway.

The southern boundary is considered to be the Trans-Siberian Highway, which begins in the city of Magadan. This actually runs in a northerly direction. For all practical purposes, the range of the Kolyma Sheep is west of the Koryak Mountains down through the Kolyma range of mountains, which are east of the Kolyma River.

In 2014 the hunting for the Chukotka Snow Sheep was open. This is the rarest and most remote variety of Snow Sheep possible to hunt in Russia.

The area we are operating is the best available and very productive. The hunting season starts on August 1-st. and lasts until the middle of September when the weather is getting worse.

The area is only reachable by helicopter.

The Sheep hunting can be combined with Kamchatka Brown Bear.

Now days to get to the Kamchatka peninsula, you need to fly with Turkish airlines to Moscow and then with Aeroflot to Petropavlovsk - Kamchatsky - the flights are every day. We look forward to helping you planning your trip, save money and time.

Kamchatka Moose is the largest antlered animal in the world. Moose is immense, usually larger than you would expect. Antler spreads can vary considerably. The Moose inhabit Chukotka and Kamchatka Peninsula.

Hunt is done using the snowmobile for transportation in the area. The hunter and the guide cover great distances by snowmobile looking for a track of a large Moose bull. Your guide drives a snowmobile and you stay in the sledge behind. Once the fresh tracks are cut, hunters follow a Moose on foot, snow shoes or skis.

Try us out and you will see that you save time and money by counting your relationship with ProfiHunt!

We are the most professional company for your adventure in Russia, Europe or Asia!

Siberian Roe Deer hunt is very popular among the Russian and foreign hunters. At the end of August this hunting attracts hunters from all over the world in Kurgan, the area famous for the hunt on this specie.

ProfiHunt offers only the best areas where all record trophies were taken and you still have a good chance to take a new one. The camps are comfortable hunting lodges.

All hunting is done on foot with transportation in the hunting area by jeeps. Spot-and-stalk is normally used; calling of Roe Deer bucks is also practiced there with a high degree success as well.

Hunting area is easy. It is well developed agriculture area with a flat terrain.

We had a fantastic hunting season 2024 for Siberian Roe Deer!

Sayan Ibex in Russia

Nickolas Birch

Brian Hauck

The Sayan Mountains are one of the northernmost spurs of the Central Asian mountainous country, at the same time, separated from its main part by several large lowlands, insurmountable for mountain ungulates, which creates the necessary prerequisites for the geographical isolation and species formation of sedentary species of mountain mammals.

According to the morphometric parameters of the body, the Sayan ibex is the largest among the neighboring subspecies. The horns of the Sayan ibex are smaller than the ones of the Altai ibex. The general color tone of males in the Sayan Mountains, dark stripes in animals are poorly expressed, and in winter plumage they have a monochromatic grayish-brown color.

Our main hunting areas for Sayan ibex are located in southern Khakassia republic.

The hunting season runs from 1 of August till early November.

For all hunting enquiries call the professionals at:

HUNTING WORLDWIDE

ASIA

Uzbekistan, located in the very heart of Asia, lies mostly on a plain, but gradually from west to east, the landscapes of this sunny country develop into mountain ranges of the Tian Shan and Pamir. The average height of Uzbek mountains ranges from 6500 to 10.000 ft.

Since 2015 the hunting in Uzbekistan was reopened and every year demand for its species grows headily. ProfiHunt had the privilege to be one of the first outfitters organizing hunts there and with no doubts keeps leading positions at this market.

Currently the following species are available in Uzbekistan:

- Severtzov Argali
- Bukharan Urial
- Bukharan Markhor
- Mid-Asian Ibex

In 2025 ProfiHunt also expects to get the permits for all of these species, therefore do not hesitate to contact us for hunting in Uzbekistan.

VERY SPECIAL

M.G., Severtzov Argali

Eduard Benderskiy

Dmitry Fedotov

Andre De Waal

Shaun Harris

Kyrgyzstan is a famous destination for hunters seeking for a great adventure. The largest Ibex in the world and different subspecies of Argali – Tian Shan Argali, Marco Polo Argali and Hume Argali inhabit these mountains.

Average size of sheep is 50 inches with occasional 60 inches trophy taken. It is an unforgettable adventure to hunt at 12.000 feet on a horseback, surrounded by a beautiful alpine panorama.

Camps in Kyrgyzstan are traditional wooden cabins or wagons. They are warm, clean and comfortable with separate areas for dining, bathing and sleeping and have electrical generation.

During the hunting season 2024 Kyrgyzstan proved again to be number one destination for big game hunters seeking for Mid-Asian Ibex and the fabulous Argali, it brought us dozens of amazing trophies. Hunters from all over the world enjoyed their trip to Kyrgyzstan with ProfiHunt.

High quality service, top skilled guides and classic mountain adventure, that's what awaits you on every hunting adventure with ProfiHunt!

Sabahudin Fazlic

Bruce Rice

Enrique Gomez

Andre De Waal

Martin Lorenzen

Kyrgyzstan is a famous destination for big game hunters seeking for Mid-Asian Ibex, the fabulous Marco Polo, Tian - Shan and Hume Argali. Mid-Asian Ibex is the largest Ibex in the world with the horn length up to 60 inches.

For most of Kyrgyzstan hunting trips horses are used for transportation in the area to increase the success chances. Expect extensive horseback riding 8 -10 hours a day and considerable walking. Some riding experience is a must.

During the day you will explore the upper edges of the mountains and examine the hillsides and feeding areas through the field glasses. A temporary tented camp is set up with the specific goal of hunting a particular animal or area. A good physical condition is an important factor in the stalking part of the hunt. Be ready for shooting up to 500 yards.

Marco Polo Argali in Tajikistan

Stewart Schanzenbach

Christopher Perdue

Tajikistan offers excellent Marco Polo Argali hunt. Over the last 25 years our hunters enjoy 100% success. Average trophy size runs from 55 to 56 inches with several 60–64-inch rams taken every season.

In the morning you get into your jeep. During the day you explore the upper edges of the mountains and examine the hillsides, feeding and resting areas through the field glasses. Once the trophy is located, you complete your stalk on foot.

In Tajikistan the camps are located at 12,000-13,500 feet. They are warm, clean and comfortable cabins with separate areas for dining, bathing and sleeping and have an electrical generation.

You will find good food and quality service. Every camp is equipped with a sat – phone.

You can hunt a Pamir or a Bukharan Ibex as an add-on trophy during the same hunting trip.

Maral (Wapiti) in Kazakhstan

Argentinian hunter

Jose Mallo

Kazakhstan is a hunting paradise with great Tian Shan Wapiti and Mid-Asian Ibex hunting. The Tian Shan Wapiti is the largest of the Asian Wapitis and a magnificent trophy. The antlers are massive and similar in form to those of North American Wapitis. Hunting areas are located in Central and Eastern Kazakhstan bordering with China.

ProfiHunt Ltd has been guiding Maral Stag hunts for almost 30 years with nearly 100% success.

Bugling a mature elk is one of the greatest hunting thrills. It is not uncommon to hear several Maral stags calling at the same time. Horses are used intensively to increase success chances. Expect extensive horseback riding 8-10 hours a day and considerable walking. Elk is generally located on open slopes of mountains at 8,000- 8,500 feet. The prime hunting time is in the morning and in the evening. Camps are hunting cabins, tents or yurts.

They are located in mountain valleys at 3,000-4,000 feet. You will find a good food and quality service. Electricity is supplied by generating sets in base camp. A Mid-Asian Ibex and Siberian Roe Deer can be hunted on trophy fee basis in almost all areas.

TY Seeker

Almost 30 years our hunters have 100% success hunting for a Mid-Asian Ibex in Kazakhstan because we take them to the best hunting areas.

ProfilHunt had his office in Almaty for 11 years. Vladimir Melnikov hunted himself many times Ibex, Maral, Saiga, Siberian Roe Deer and Karaganda Argali. He has been guiding for Maral, Ibex and Karaganda Argali for 7 years. That's why you will enjoy this trip and have a chance to shoot a great Mid-Asian Ibex. This hunt is a spot-and stalk hunt. Horses are used intensively in order to get hunters into prime game country. Ride before you go on this hunt. Fly camps are built at elevation of 8.000 feet to hunt particular area or animal. During the day you will explore the upper edges of the mountains and examine the hillsides, feeding and resting areas through the field glasses. Normally you see numerous Ibex every day.

Tents, yurts or hunting cabins are used to accommodate the hunters in these regions. Base camps have no modern conveniences but they are clean and warm. In all base camps you will have a cook and interpreter.

Altai Argali in Mongolia

Alejandro Calzada

Burkhard Zietlow

This magnificent Sheep inhabits Altai Mountains of western Mongolia, Russia and Kazakhstan. Mongolia is the only country where hunting for the Altai Argali is legal. Mongolian mountain desert steppe is an ideal habitat for Sheep and Ibex. This country became one of the most popular destinations for mountain hunters who expect a well-organized hunt.

The average trophy size is 52-55 inches, with a number of trophies taken in excess of 55-58 inches.

The hunting is done on foot using jeeps for transportation in the hunting area. Good number of rams is found at 7.000-8.500 feet. You will spot rams, evaluate their size, and then complete the stalk. The camps are traditional Asian yurts. They are warm, clean and comfortable with separate areas for dining, bathing and sleeping. Every camp has a cook and interpreter. You will find a good food and quality service. Electricity is supplied by generating sets.

We had a very good hunting season in 2024 with a super quality rams taken by our customers!

Hangay Argali in Mongolia

Denis Morozov

Alexey Kim

The Hangay Argali was created in 1997 to make the registration of the trophies taken in the area located far from Altai Mountains to the North from Gobi Mountains.

This area belongs to the southern range of Hangay Mountains. In the early 80-ties this trophy was proclaimed as Mid-Altai Argali and sold at lower prices than Altai Argali hunt. Males that inhabit this area are smaller in body and horns size than males of Altai Argali, but bigger than Gobi Argali.

To avoid confusion and to single out Hangay Argali as a separate specie, it was decided that Hangay Argali inhabits the areas to the west of the 97 eastern longitude and Gobi Argali inhabits the areas to the south of the 45 northern latitude.

Gustavo Arredondo

Mongolian mountain desert steppe is an ideal habitat for Sheep and Ibex. This country became one of the most popular destinations for mountain hunters who expects a well-organized hunt.

Gobi Argali is a magnificent Sheep that inhabits Mongolian Mountains.

The specie was always of great interest for the hunters, and the trip itself was always among the most popular.

The average size of Gobi Argali horns is 41- 44 inches with the base of 14 - 16 inches. Gobi Argali horns are not so heavy and are a bit shorter than those of Altai Argali. You can also hunt a white-tailed gazelle as an add-on trophy.

The trophy quality of the rams taken by our valued customers in the season 2024 was excellent!

Altai Ibex in Mongolia

Alejandro Calzada

Albert Fusella

Mongolia has many different vegetation zones: steppe, desert, taiga forest and mountain desert steppe. That is why this country holds a great diversity of animal life.

There are ideal habitats for Altai Ibex and Gobi Ibex; Altai, Hangay and Gobi Argali; White-tailed Gazelle, Wolf, Maral, Moose, Brown Bear, Siberian Roe Deer.

Altai Ibex inhabits Altai Mountains of western Mongolia. The average trophy size is 39 - 45 inches, with a number of trophies taken in excess of 50 - 53 inches.

This hunt can be nicely combined with Gobi Ibex, Siberian Roe Deer, Wolf and Maral.

Eddy Dankers

Gobi Ibex in Mongolia

Albert Fusella

Stephen Skaggs

Mongolia offers a great variety of game for the hunters. Gobi Ibex inhabits Gobi Desert, the coldest one.

Gobi Desert is an arid high plateau located in Mongolia and China and surrounded by mountain ranges.

Other big game species found here are Gobi Argali, White-tailed gazelle, Wolf.

The average length of the horns is 35 - 38 inches. The horns are slimmer and shorter than those of the Altai and Mid-Asian Ibex, however the cross ridges are often larger and closer together.

General color is pale brown without a lighter saddle. This hunt can be nicely combined with Altai Ibex.

Leo Groenvall, Bukharan Markhor

Bezoar Ibex is one of the most beautiful mountain goats. It can be successfully hunted in Turkey. With its outstanding holiday and sightseeing opportunities and breathtaking mountain panorama, Turkey is one of the most popular destinations.

The Bezoar is a handsome, relatively slender animal with blackish-brown markings that contrast with the lighter overall color. Male Ibex can weight 80-200 pounds with average 40-41-inch horns length. The horns are large, scimitar-shaped, laterally compressed. The front edge is a sharp keel with a number of bold, sharp-edged, widely separated knobs.

Some outstanding trophies of 50-55 inches are taken every year with special planning. Hunting camps range from luxury hotel to village house.

Beside Bezoar Ibex, Turkey can offer other species for hunters: Konya Mouflon, Hybrid Ibex, Coastal Ibex (a new species recently recognized by GSCO), Anatolian Chamois, Anatolian Red Stag, Wild boar. Every hunter will find something interesting in this hospitable country.

Nepal is characterized by mystic peaks, exotic hills, scenic valleys, secluded forests, and other different forms of untouched nature. These overwhelming natural assets make Nepal an ideal destination for adventure tourism including the recently popular adventure of wildlife hunting.

Nepal boasts a hunting reserve of its own kind where certain species of wild animals are allowed to be hunted. Dhorpatan Hunting Reserve, located not very far from the capital Kathmandu, is a wildlife reserve on the footsteps of the Himalayas with specified hunting blocks, seven to be exact. The area and the animals involved in the adventure make hunting in Nepal the ultimate experience for hunting enthusiasts.

The hunting season determined as March-April in Spring & October-November in Fall.

Hunting in Nepal takes place in really harsh conditions, at an altitude of 4.000 to 5.000 meters at low temperatures and abundant precipitation. For hunting it is necessary to use the whole day, it is completely usual when hunters may walk and climb 8 – 10 hours a day in search of a worthy trophy.

Christopher Pedue, Vercors Chamois

Aaron Adkins, Chartreuse Chamois

France offers very vast opportunities for hunting. Here are the species possible to hunt: Chartreuse Chamois, Alpine Chamois, Vercors Chamois, Pyrenean Chamois, French mainland Corsican mouflon, European mouflon. The surroundings are very wild and absolutely outstanding (Alps and Pyrenean mountains).

The number of hunting permits for those very desirable species is very limited and it is an important issue, to be sure of getting the permit in the right place, you should look for the hunt beforehand.

The hunting season goes mid-September to end of January.

This is a spot-and-stalk hunt. The hunt considers long walking, sometimes 6-8 hours a day. You should expect the altitude of 3.200-6.500 ft.

The accommodation is in small hotels close to the hunting area. European class 3-4 stars. Nice and comfortable with traditional cuisine restaurants.

For all hunting enquiries call the professionals at:
+1 (775) 737 3913 or **hunt@profihunt.com**

Christopher Pedue with a giant French Mainland Corsicaion Mouflon

Low Tatra chamois is a unique Chamois specie. Scientifics separated the Tatra chamois from the Alpine chamois in 1972 because of its larger skull and certain other cranial measurements, its somewhat different coloration, and its different ecological requirements. Its horns, however, are about the same size as those of the Alpine chamois.

The number of tags for the very unique Low Tatra chamois is very limited / only 4-5 per year / and the trophy quality is very good. The hunting areas are located in North-East and North-West Slovakia, appr. 300 km away from Budapest and 500 km from Vienna airport.

The hunting season is November – December.

It is spot and stalk. The terrain is quite demanding, good physical condition is requested.

For more information and videos please visit our site at www.profihunt.com

Alexey Kim

Denis Morozov

Austria is well known as a world hunting destination with a lot of hunting opportunities: Alpine Ibex, Alpine Chamois, Mouflon, Red stag, Roe deer, Fallow deer, Wild Boars. Picturesque landscapes, high-end service, professional organization and warm hospitality attract hunters from all over the world.

There are many ways to get to Vienna by different airlines. You will be met and assisted through the customs at the airport by our representatives who will take care of all the paperwork and formalities. We also recommend to our hunters to rent guns of very good quality available in the areas to avoid traveling with the own rifles. Then we will arrange the car transfer to the hunting area due to the species you hunt.

The hunting season runs from August till the end of December.

This is a spot-and-stalk hunt. The hunt on Ibex and Chamois means some walking. Not much climbing involved, physically not difficult. You should expect the altitude of 3.200-6.500 ft.

Accommodation is organized in 4* hotels close to the hunting areas. Ones are nice and comfortable, with traditional cuisine restaurants at your service.

Denis Morozov

Travel is to Port Sudan where, depending on flight schedule, you may spend the first night in a hotel. There are hotels of 4*-5* level to choose and we can assist with the booking. From Port Sudan you will go to the hunting area in the mountains and ranges stretched along the Red Sea coast. The distance from Port Sudan to a camp is up to a 7-hour drive.

The hunting season runs from November till the end of May

This is 5 days hunt with 7 days in total together with traveling.

Classic mountain spot and stalk hunt with lot's of walking involved.
Average shooting distance 300-400 meters.
Accommodation provided in temporary tented camps.
Ordinary tents.
If you need to be on-line or just in case, we recommend to take a satellite phone.
